Technical Services Memo

Volume: 25, Number: 49 December 16, 2003

Product: PA M-PA	System: Conventional, EDACS
Part Number: 19D438676G5, 19D903620G1	
Maintenance Document: LBI 38644, LBI 38834	

Category: Portable

Subject: MPA - Matching battery base plate and front covers

Summary: MPA/MTL/P400 portables have two different versions of front covers. Each cover requires a different battery base plate assembly. The correct components are difficult to identify.

Action: The two front covers are easily identified by their associated battery base plate. The earlier front cover assembly (19D438676G5) is identified by a battery base plate assembly with exposed screws holding the battery contacts.

The later front cover assembly (19D903620G1) is identified by a battery base plate assembly where there are no visible screws holding the battery contacts. The components of these two assemblies are illustrated below:

19B235165G1
base plate front view

19B235165G1
base plate rear view

battery connector seal

19D438666P1
inner base plate

For the 19D903620G1 front cover:
The battery connector seal and inner base plate are not used in this front cover.
