

Here's a link to the latest drivers:

[http://silexamerica.com/index.php?option=com\\_content&task=view&id=113&Itemid=137](http://silexamerica.com/index.php?option=com_content&task=view&id=113&Itemid=137)

Do all configuration hardwired cat5 to the Silex

When you've got the 2000 configured  
[And built your ad-hoc network],  
power up the mixer and the Silex  
without connecting USB.

Connect USB when all power up sequences are complete  
[only the wireless light flashing on the Silex].

Load Virtual Link

if you don't see the Yamaha, unplug the Silex and restart.
