TQ3311  
LBI: n/a

**CATEGORY:** Portable

**SUBJECT:** M-PA Programming Cable TQ3311

When the TQ3370 programming adapter replaced the TQ3310, the programming cable (TQ3311) was changed from 19A705477P1 to 19A705477P2.

To use the 19A705477P1 cable for "Flash" programming, with the TQ3370, the wire on pin 10 must be moved to P5 on the DB25 connector.

This modification must be made to allow M-PA radios to be "Flash" programmed.
