

**ERICSSON** 

For times when your battery charger is not accessible,  
but communication is vital.....

## The RBP-1 Refillable Battery Pack.

*New!!**New!!*

EGE is now offering the RBP-1 refillable battery pack.

This battery pack uses 12 AA alkaline batteries for the times operators must operate in harsh environments where a 110 volt AC power supply or vehicular charger is not available to recharge a ni-cad battery pack. With the RBP-1, the radio operator simply opens the RBP-1 case, takes out the old AA batteries, and adds fresh AA batteries to continue communicating with 1200 mAh of battery power! The whole AA replacement process can be completed in less than two minutes!

It is ideal for forestry personnel, civil defense personnel, fire fighters, construction workers, policemen and other workers who often times don't have access to battery chargers. This product ensures long term communications simply by inserting backup sets of economical, lightweight AA alkaline batteries. These AA battery sets can be purchased anywhere for less than \$5.00, making the RBP-1 an even greater value!

Specifications: 4 1/4" x 2 9/16" x 1 1/2"

Weight (Empty): 4 1/2 oz.

Weight (Loaded): 14 oz.

The RBP-1 is available for the MPD, PLS, MPA, MTL and TPX radios only.
